

"INVENTORS"

A cigar of tempting value to men who enjoy a tobacco that gives out a fascinating fragrance. The "INVENTOR" smokes free and leaves a long pearly ash, solidly knit and will not crumble. Genuine Havana leaf, made by experts and is attractive in appearance.

IT SHOWS QUALITY

Your physician will tell you what the "INVENTOR" stands for among men who know good tobacco and good cigars. WE HAVE A HALF DOZEN SIZES AND SHAPES IN VARIOUS COLORS.

Adelina Patti

One of the most popular cigars in the market among connoisseurs. There is not a fault to be found in one of these cigars for they are made right from the finest grade of tobacco grown in Southern Cuba. There is no better cigar because none is made. We can supply you in any quantity from a single cigar to thousands.

The satisfaction in these cigars lies in their mildness, the tobacco being especially selected for this feature.

We have the largest stock of cigars, tobacco, cigarettes, pipes, tobacco jars, tobacco pouches, match boxes, cleaning utensils, etc. We have the stock and the goods are fresh.

We make up vacation packages of articles used by smokers and put in shape for easy handling. We want your daily custom. Get used to smoking the best and you will have no other cigars.

NEWEST NOTES OF SCIENCE

Individual fleas have been known to live six years.

Spain's fastest railroad trains make only about twenty-two miles an hour.

Oil was used for illumination more than nineteen centuries before Christ.

There are more than 2000 distinct operations in the assembling of a high-grade watch.

No one language employs even a majority of the sounds of which the human voice is capable.

According to the estimate of a Brown University professor, the world is 72,000,000 years old.

Within thirteen years every Japanese city of importance has established an electric street car line.

The value of the known mineral output of Alaska to date is in the neighborhood of \$148,000,000.

An automatic burglar alarm recently patented by a Russian army officer fires 200 shots automatically.

Formosa's camphor output last year was more than a million pounds behind that of the previous year.

The first international aeroplane race for the Bennett trophy will be held at Rheims, France, in August.

Europe has about 107 inhabitants to the square mile, North America about seventeen, and Australia less than two.

The Russian Government has forbidden the use of strong narcotics, cocaine, etc., by dentists in their practice.

Simple but effective clamps to hold rugs in position on polished floors have been patented by two Oklahoma men.

The United States consumes over 40 per cent of the world's output of tin, but contributes an almost inappreciable amount.

The wettest known place in the world is Cherrapongje, Southwestern Assam, which has an average annual rainfall of 610 inches.

St. Petersburg is to have a modern system of drainage and water supply by compulsory construction under Government supervision.

The sensitiveness of photographic films is said to be increased by a preliminary exposure, too brief to produce a latent image.

The electrolysis of water and gas mains in Boston and vicinity is said to be proceeding at a greater rate than ever before known.

A valuable deposit of tin has been discovered in Rhodesia, at a point which experts declare to be the site of an ancient working.

The world's gold production last year was the largest in history, \$409,000,000, against \$400,000,000 in 1907 and \$390,000,000 in 1906.

Salt is mined in nearly every portion of the German Empire in such quantities that only about 2 per cent of the salt consumed is imported.

A machine that automatically weighs or measures a medicine and fills eight capsules at the same time taken to fill one by hand is a recent invention.

The rebuilding of New York city's Catskill water system will require 58,000,000 cubic yards of excavation, 23,000,000 more than the Panama canal.

The lowest point of dry land in the United States is in Death valley, Cal., 278 feet below sea level; the highest, Mount Whitney, Cal., 14,501 feet.

Inks in which iron is an ingredient keep better if kept in earthen jars than in glass bottles, as the exposure to light hastens their decomposition.

For the German army's new gun, designed for use against airships, there has been developed a shell that will burst inside a balloon and ignite the gas.

More than 170 tons of human hair, most of it from China, are annually imported into France, where it is made up for use in all parts of the world.

Of Pennsylvania's 15,000,000 acres of timber, about one-half are in mature trees, one-fourth in second growth and the remainder in stripped or brush land.

For the storage of torpedoes the French Government has constructed and sunk in the Mediterranean, near

Toulon, an artificial island of concrete and steel.

The first attempt to ship Swedish iron ore to the United States for smelting was made recently, when a ship loaded with 5000 tons sailed for Philadelphia.

A fish, found for the first time recently in Bahama waters, pass a much of its life within the shell of a large mollusk without apparently disturbing the latter.

The American record for rock tunneling was broken when 476 feet of the Los Angeles-Owens river aqueduct, nine by eleven feet, was bored through solid rock in March.

Naturalists have identified 117 species of frogs, some of which are found native in every part of the world except New Zealand and the southern portion of South America.

A Canadian Government expert has estimated that there are over 20,000,000 tons of marketable fuel in the Crow's Nest Pass coal field of Alberta and British Columbia.

A German scientist claims to have discovered the germ of trachoma in the eyes of apes, and to have demonstrated that the disease is contagious only in its first stages.

About 100,000 tons of tinplate scrap, including used cans, are detained in Europe each year, and about 60,000 tons in the United States, for the recovery of the tin and iron.

That fish may carry typhoid and cholera germs from contaminated streams into hitherto unpolluted tributaries has been proven by experiments by the French Biological Society.

A Government physician at Manila has succeeded in cultivating the leprosy bacillus, and will experiment further with a view to establishing a specific treatment for the disease.

Japanese waterproof paper is made from bamboo and eucalyptus, mixed with fibers of the gampi and other shrubs and treated with a solution containing camphor, caoutchouc and resin.

The diamonds produced by the recently discovered field in German Southwest Africa are of the first quality, but almost uniformly low in weight, averaging one-third of carat each.

It is proposed to erect a monument by public subscription in honor of Marey, the Frenchman, who is termed "the father of the moving picture," because of his inventions along that line.

The Adelskiold gold medal, awarded but once every ten years, has been given by the Swedish Royal Academy to Thomas A. Edison for his inventions in connection with the phonograph and electric light.

The Arabian desert between Oman and the Red Sea is believed to be the hottest place on the earth. Scarcely any life is known to exist in the interior, and even on the coast temperatures have been recorded higher than anywhere else in the tropics.

An expert's studies of earthquakes in the United States, India and Japan for more than twenty years show that they almost always draw the banks of rivers nearer together and open fissures parallel to them.

German scientists expect to get 600 horse-power hours of work from each ton of peat which will be taken from immense bogs in that country and converted into gas, together with much ammonia as a by-product.

A wealthy lumberman has offered the University of Minnesota a 2200-acre tract for experimental purposes by its school of forestry, conditioned on the purchase of about \$5000 worth of other land now held by Indians.

Experiments by the Aeronautical Society of Great Britain showed that a horizontal thrust of from twenty to twenty-seven pounds per horse-power can be obtained with flapping wings, about six pounds more than with the best airship propeller yet devised.

After a series of experiments relative to the effects of tin taken into the human system, a Scotch physician has announced that canned goods containing two or more grains of the

metal to the pound are potentially deleterious to the health.

Although the Heraclea coal fields extend along the shore of the Black Sea forty miles and extend 200 miles inland, the coal contains so many impurities that mining is unprofitable except at one point, from which only 600,000 tons a year are taken.

THE MAN WITHOUT A HOME.

At a recent dinner in New York Joseph H. Choate, former Ambassador from the United States to Great Britain, was speaking of the necessity for proper ambassadorial residences in foreign countries.

"When I first went to England," said Mr. Choate, "I spent weeks and weeks looking for a house. It was most arduous service in my country's interest. I trailed all over the available sections of London, and while I was at it a London bobby arrested a man who was pursuing a most erratic and forlorn course out Hyde Park way. 'Here, my man,' said the bobby. 'What are you doing? Why don't you go home?'"

"I have no home. I am the American Ambassador," replied the man bitterly.

PUTTING TIP FROM ST. ANDREWS.

A man on his first visit to St. Andrews (Scotland) golf links, was much impressed by the high standard of efficiency which he saw displayed on the greens by those with whom he played. He studied the actions of these heroes to see if he could discover any common feature in their methods. At last he saw light. He observed that they all held the left hand more under the club when putting than they did when driving.

From this he deduced a rule of conduct—"see the finger nails of the left hand when addressed to the ball." For the rest of his stay, and it may be for some time afterward, his own putting improved considerably.

COMPARISON.

That figures are mendacious
Has frequently been shown;
How oft the joy fallacious
Of wealth has been made known!
Here's Mme. Goldenfeather,
With millions every year,
Whose lawyers come together
For quarrels sadly queer.

And little Mrs. Plainly,
With children at her knee,
Whose life is ordered sanely,
Seems happy as can be.
There is no sign of fretting,
No tear is on her cheek,
Although her husband's getting
Just seventeen a week!
—Washington Star.

Chicago's Civil Service Commission recently held an examination for the place of chief gas tester, under a new law, and the results might please The Daily News, which remarks that "they are another illustration of the possibility of attracting experts into public service through merit tests rationally applied." The list of eligibles which the commission has posted is headed by Judson P. Dickerman, a graduate of the Massachusetts Institute of Technology, assistant professor of chemical engineering at the University of Wisconsin and a gas expert on the Wisconsin commission which regulates public utilities. The gas inspector for the city of Madison, Wis., is second on the list, the chief of a St. Louis gas company's laboratory is third, a chemist for Swift & Co. is fourth and the chief gas tester of Detroit is fifth. The satisfactory result of this competition is similar to that achieved by the New York State commission in examining for high grade technical positions, including even those of a legal character.

"That woman won't take either side of the social dispute until she is reasonably sure which one is going to win. She's a cat!" "Ah! then that accounts for her being on the fence." —Baltimore American.
